

***Additional Checklist for Flood Dosed Systems**

The following is a list of information that must be included in plan designs for flood dosed systems. **Use this list in addition to the standard septic system design checklist.**

Information Required with Plan Designs for Flood Dosing Systems

- _____ Length of sewer line from septic tank to flood dosing tank
- _____ Dosing tank size in gallons
- _____ Dosing tank manufacturer
- _____ Inlet elevation of dosing tank
- _____ Pump size (including manufacturer and model)
- _____ Manufacturer's pump curve chart
- _____ Elevations of pump float positions to activate the pump, to inactivate the pump and to activate the alarm
- _____ Length of delivery line from pump discharge to distribution box
- _____ Diameter of delivery line from pump discharge to distribution box

*See other side for example system design drawing.
